

9 September 2020

Dear parents and carers,

I wrote to you earlier this week to outline that there was some evidence to suggest that sickness in younger people could be linked to Covid. Further to this, there have been other symptoms outlined that seem more prevalent in younger people with Covid than adults. These are:

- Sickness, diarrhoea and stomach cramps
- Muscle pain
- Fatigue
- Sore throat

These are in addition to the well-publicised symptoms:

- High temperature
- A new, continuous cough
- Loss of taste or smell

Please can I ask that if you feel your child has any of the above symptoms they remain at home and you contact school.

As in my last letter to you, we have already extended our 48 hour stay at home policy to 7 days, if a child has sickness or diarrhoea.

I appreciate your co-operation at this difficult time.

Kind Regards,

Orienne Langley Sadler
Headteacher
